Complaint Almost Gone.

# OTTAWA REVERSES ON PRINCETON; WINS

VICTORY WHEN SATURDAY'S COMBAT SEEMED ALMOST -SCORE 28 TO 26.

The heretofore unbeatable Princeton High School football team Sat-· urday afternoon saw its hopes for a Sharp ......48 45 46 fling at the state championship rude F. Woolbert ...44 42 ly shattered when Ottawa High, after J. Stewart . . . 42 a wonderful reversal of form, took the Bureau county lads down the lines Kneussl ...... 42 27 to a trimming of 28 to 26.

was unsulfied by any features that Chiras ......40 sometimes go with an uphill win against a team on strange grounds. Cleaner, prettier and all around better football after Ottawa was jerked up by a realization that inglorious defeat confronted them unless they got down to business, marked the combat in the two final stages with the local boys in complete mastery of the

Completing the first half with the score standing 26 to 16 in Princeton's favor, Ottawa came back in the third quarter and made the count 26 to 22, and in the final session topped the enemy by another touchdown and wound up the battle with a two-point shade that gave them victory. To complete the win Bigg's warriors almost strafed the opposition in the last minute of play and twice in that interim had the ball on Princeton's three yard line. The ball went to the visitors after downs had been responsible for Ottawa's forfeiture of the ball. Princeton's back field, of course had to kick the pigskin into safe territory, but strategy afforded but little security aganist another score when Woodward came ramping back down the field and carried the ball within three yards of the goal line and was about to take it over tree, keep an accurate record of the when the whistle rung down the curtain, closing the battle.

Ottawa, after adjusting itself against defeat, played stellar football at all stages and in the last half the rushes, line smashes and long runs ficial means of orchard heating so overwhelmed the opposing youngsters that painfully as it was to see, there left no room to doubt but that Princeton was doing just what everything else does when it meets its master. It evidenced a desire to quit, and only the sensational spurts of Gross, the clever little Bureau county sr-Journal. half back, and Russell, the Princeton captain, enlivened the combat for the the sidelines. When Woodward drove

## TREES PUT IN FREEZERS.

#### Plants Enveloped to Study Temperature Effects.

A contrivance designed to freeze whole trees has been constructed at the Utah Agricultural college, Logan, Utah, to aid in experimental work intended to discover, under actual orchard conditions, the frost danger

The contrivance is very similar in principle to the old fashioned icecream freezer. It consists of a huge galvanized iron tank, large enough to enclose an entire tree. This tank is divided into halves and each half is fastened to a plank base, so constructed that a half can be frozen, and the two parts drawn together, completely enclosing the trees.

The tank is doubted walled, with a four-inch space between the walls. A on the inner wall. Ice and salt are hung from different branches of the temperature within the tank.

The resistance of buds to frost can be accurately determined by this method and data collected that will tell when smudge pots or other artishould be used to save the fruit crop.

The tree is not injured by the process, since care is taken and constant watch is kept to prevent the danger

## THINGS THAT NEVER HAPPEN By GENE BYRNES

## The Clothes Moth

In the spring of the year the tiny, yellowish moth which is seen occasionally flitting about the lamp at night is an indication to the house- burlan is not necessary except where keeper that clothes moths are begin- the rolls or bales are to be transportning their work of destruction

The moths which are thus attracted to the lamps at night or fly away from garments or portieres when these are handled do not themselves eat anything and could not eat if they wanted to, as they have no biting or chewing mouth parts. The destruction, as every housekeeper knows, is occasioned entirely by the tiny larvae working underneath scanty webs or in little cases made from particles of the garments on which they feed webbed together by a whitish silk. The common clothes moth of this country large lid covers the tank and rests is the webbing species, known as the webbing or southern clothes moth, packed in between the walls and over and its presence on garments can be the lid. The temperature inside is detected by this smoky of whittish regulated by pumping in cold or web which is in evidence even before warm air, and the air inside is kept the garments have been much eaten. stirred by an electrically driven fan. If from these indications the larvae Four self-registering weather bureau are discovered in time, the larvae and thermometers and a thermograph, webs can be easily removed by a stiff brushing of the garments.

> The protection of woolens, furs and feathers and like materials from the attacks of the larvae of these moths is secured only by constant vigilance and careful inspection and treatment.

As early as possible in the spring, all woolens, furs, etc., the use of which can be dispensed with, should be put away in safe storage for the summer. Before being packed away such articles should be thoroughly brushed and beaten and, if possible, exposed to the strong sunlight for several hours out of doors. The brushing is very important in order to remove the eggs or young larvae which may have escaped notice Articles so cleaned and sunned should thus put away should be given the same through cleaning and reinspected during the summer, preferably every two weeks. In no case should such examinations be at intervals of

greater than three weeks or a month. Woolen clothing and furs, etc., may be packed away safely for the summer by enclosing them in several wrapplngs of paper or in well-made bags cotton or linen cloth or in paper sacks which can be tied or otherwise securely fastened, to prevent ingress of the moths. In these packages can be placed such repellments as tobacco dust, camphor, naphthalene cones or balls, and cedar chips, etc. The odors of these substances are disagreeable to the parent moths and act as a repellent, but they will not kill eggs or larvae which may be enclosed in the prior to packing away. The same precaution, are needed with cedar chests

and wardrobes. The best means of protection from available in all larger towns, are the refrigerating rooms provided for that purpose in practically all storage warehouses, and the adoption of this method of protection for all valuable garments or furs during the hot

months is strongly recommended. Articles in daily or weekly use, and apartments frequently aired and swept or used as living rooms, are not apt to be seriously attacked. There is a risk that under these conditions attached carpets may be eaten around the border where the insects are not so much disturbed by walking and sweeping, and particular attention should be given to the border areas. Loose rugs are much less apt to be injured, but it is a good plan during the summer, if these are allowed to

remain on the floor, to turn them over and thoroughly sweep or brush the under surface once every two or three

Rugs or carpets put away for the summer should be first thoroughly cleaned on both sides and beaten and then wrapped up in tight rolls p. otected by wrapping with tar paper. The additional covering or bailing with ed or will require considerable hand-

### Health Notes.

It is said that excessively oily hair is usually caused by an unhealthy condition of the system and that a person so afflicted must give her body proper nourishment to bring it to a normal state before local applications will be effective.

Massage will accomplish something in changing the shape of the mouth. Place the first finger on the upper lip just under the nose, put the thumb at one corner of the mouth and the second finger at the other corner. Hold the first finger stationary, awing the mouth up into a cupid's bow with the second finger and thumb.

Indigestion is anything but conducive to good looks or a clear skin. Avoid overeating, which is bad for the skin as well as the body. Proper diet is absolutely essential to a good complexion. Eat nourishing, well-cooked food and drink plenty of water between meals. See that proper elimination takes place each day. Eat sparingly of pastry and confectionery.

When the inside of a coffee pot becomes black from long use, nearly fill it with w ter, throw in a small piece of hard soap, and boll an hour. It will a second time in fresh, clean water and rinsing well.

TROUGH WATER METER.

## Gives Animals Drink When They Approach.

It's a wise trough that knows how much an animal wants to drink. But that such wisdom is not impossible is shown by a new trough.

There is a platform which works in conjunction with valves on the supply and drain pipes of the trough.

When a horse steps on the platform the valves are opened and a stream of water pours in. As he slakes his thirst and steps off the platform the inlet is closed and the surplus water is drain-

The credit for the device belongs to Victor A. Millen of Ohio. The valve mechanicism of his device is mounted in a concrete well in the ground. The valve of the supply pipe and the valve of the drain pipe are mounted side by

## DOGWOOD IS ABUNDANT.

## Plant Might Be National Flower of United States,

If the United States were to choose a national flower it might well be the dogwood. In the spring, from Maine and Minnesota to Florida and Texas, it lights up and beautifies the countryside with the abundance of its white blossoms,

Even the most unobservant know it in the spring, and no one seems able to resist the temptation to break off the blossoming branches and

carry them home. The result of this practice is that the dogwood is disappearing from many woodlands. This is the more general, because, although it is generally too small for saw timber, its fine hard wood is used in making toothpicks and skewers, and its bark has a medicinal value.

The Ruling Passion. "Be as light as you can on me, judge."

"Twelve months." "Couldn't fix it so I could be out in time to see the world series next

## SHRAP-NEL

Shrap, lemme tell ya it aint no laffing matter. Wouldja believe it, Sunday morning I was awakened outa peach of a beauty sleep at an awful hour by a red headed nurse hammering at the door. She said she seen that ad in my colyum Satiddy nite and thought that somebody I wrote up musta met me en a dark street. I see no, nothin like that never hap pened-I don't need no nurse, but if l ever meet the compositer that does thim things I could guarantee her a steady job for the winter.

Dya know Shrap since I been doing this amusin and instructive colyum quite a few of Toby Doolan's best friends have quit speakin to him. That's one advantage of doing a colyum in Ottawa. You can say anything and get by cause they'll blame it on

During the foot-and-mouth disease epidemic among cattle, the quarantine officers were called upon for quick and radical action. An army of 1,009 inspectors was formed and every farm and stock yard in New York state was visited and thoroughly investigated. Each inspector was clothed in rubber from head to heel, and in addition he was provided with a rubber fumigating cape and a tin basin and sponge, in order to give his rubber clothing a germicide bath of bichloride of mercury after each inspection.

In order to disinfect the clotising lying closer to the body, a white rubber fumigating cape was fastened snugly about the inspector's neck and its folds spread out like a tent over malin and permanganate of potash. When these in their crystalline form are mixed, a vigorous reaction takes place and a large quantity of formaldehyde gas is liberated. Thus, before an inspector left a place, all of his clothing, whether of cloth or rubber, was thoroughly disinfected and as

Foley's Honey and Tar is great." writes 1 W. Day, 65 Campbell Ave. E. Detroit, Mich. "It relieves bronchitis quickly. My complaint has almost gone and I hope never to have it again." The experience of thousands proves there is no better remedy for coughs, colds or croup. The genuine this old reliable family cough medicine should be in every home every

## Killed by Poisons

winter. Insist on Foley's Honey and

Tar-time tried and never failing

All scientists agree that poisonous products in the blood are eliminated by the kidneys and liver. The kidneys act as a kind of filter for these products. When the kidneys are changed or degenerated, by disease or old age, then hese poisons are retained in the body. If we wish to prevent old age coming on too soon, or if we want to increase daily between meals to flush the kidneys. Then procure at your nearest drug store Anuric. This Anuric drives the uric acid out. Scientific men have learned that in gout, also rheumatism, poisonous uric acid crystals are deposited in or about the joints, in the muscles - where inflammation is set up.

If we wish to keep our kidneys in the best condition a diet of milk and vegetables, with only little meat once a day, is the most suitable. Drink plenty of pure water, take Anuric three times a day for a month. Anuric is many times more potent than lithia.

QUINCY, ILL. - " Some years ago I had nervous indigestion and my heart became weak. I took Dr. Pierce's Golden Medica! Discovery and was cured.

" For the last twelve years my kidneys have been causing me a great deal of misery and of late it became almost un-bearable. My back would ache so bad at times I could scarcely move. I had scald-ing urine, could not control my bladder. During that time I tried various remedies During that time I tried various remedies with little or no relief. Just recently I learned of Anuric. Knowing how much benefit I had received from the use of 'Golden Medical Discovery' I concluded to try the Anuric Tablets and I have not finished my first bottle, but the scalding has stopped. I have complete control of my bladder, my back is better than it has been in years, and I can get around without distress or pain. Judging from what this medicine has done for me in so short a time smine having become a so short a time (mine having become a chronic case) I think it a perfectly wonderful kidney remedy and would advise those who suffer with kidney ailments to try it. J. A. GRAY, 465 S. Third Street

# IF BACK HURTS USE SALTS FOR KIDNEYS

The actual disinfecting of barn- Bat less meat if Kidneys feel like lead or Bladder bothers you-Meat forms aric acid.

You simply must keep your kidneys active and clean, and the moment you feel an ache or pain in the region, get about four ounces of Jad Salts from any good drug stere here, take a tablespoonful in a glass of water before breakfast for a few days and your kidneys will then act fine. This famous salts is made from the acid of trapes and lemon juice combined with grapes and lemon juice, combined with lithia, and is harmless to flush clogged kidneys and stimulate them to norm activity. It also neutralizes the acide in the urine so it no longer irritates, thus ending bladder disorders.

Jad Salts is harmless; inexpensive makes a delightful effervescent lithia-water drink which everybody should take now and then to keep their kidneys clean, thus avoiding serious complications.

A well-known local druggist says he tells lots of Jad Salts to folks who believe
